

Lease LED. Save Energy. Save Money.

LET YOUR HYDRO SAVINGS PAY FOR THE ENTIRE PROJECT

WHY SWITCH TO LED?

1. LEDs reduce energy costs by 40–90% since they can produce **more light with less power**.
2. LEDs reduce maintenance costs, **lasting up to 50x longer** than other light sources.

3. LEDs **reduce cooling costs** because they produce very little heat. 90% of the energy used by LEDs produces light, while only 10% of energy used by legacy lighting sources produces light.
4. LEDs are safer and healthier. They help you achieve **greenhouse gas reduction** goals by lowering CO2, N2O, and CH4 (carbon dioxide, nitrous oxide, and methane).
5. Because you have **better things to spend your money on than the hydro bill**. It is likely that all the money you need for an LED retrofit is being sent to your hydro company unnecessarily.

GO GREEN, SAVE MONEY!

BENEFITS OF LEASING

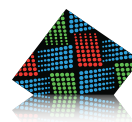

Our leasing program will finance the **TOTAL SOLUTION**, including fixtures and hardware, accessories, freight, installation, and start up.

We will conduct a detailed energy audit and apply for government rebates with all paperwork taken care of.

With leasing, you spread out the acquisition cost of your equipment over time, freeing up valuable capital to allow you to expand your business. Your monthly hydro savings from switching to LED will essentially pay for the entire project.

First payment is all that is required when you sign up.

A variety of payment options are available. 5 year warranty included in your plan.
